## Description

The XNC KNX provides the functionality for an IQ3 Controller to be able to communicate with a KNX network. The IQ3 Controller will be able to read 130 different KNX variables and write another 70 KNX variables.

The 200 KNX variables available to the IQ3 Controller can be combined with your KNX network in the ETS3 software.

With the XNC KNX comes a piece of hardware which works as a gateway between the IQ3 Controller and the KNX network. The gateway is called the XNC KNX Gateway.

Features

- Read 130 KNX values

- Write 70 KNX values

- Gateway to KNX network

- 200 KNX variables available
